PROSPECT OF THE FUND

INVESTMENT STRATEGY

The Fund Manager's investment philosophy focuses on medium to long term value creation and wealth protection. In identifying quality investments, the Fund Manager shall adopt a top-down investment approach based on comprehensive due diligence on the nature of the investment, as well as independent, robust and thorough research analysis that will lead to prudent investment judgment. Certain macro and microeconomic factors will be considered in selecting investible securities. The Fund Manager intends to make investment decisions based on the continuous assessment of the market and specific investments that offer competitive prospects for the duration of the Fund. Specifically, the Fund Manager will adopt the following investment strategy:

Euro Bonds: The fund will invest mostly in Euro Bonds with high yields in order to boost the Fund's overall performance.

INFORMATION ON NOVA DOLLAR FIXED INCOME FUND

Money Market: The Fund would seek out the best rate relative to risk available in the market amongst Federal Government Treasury Bills and placement with CBN approved banks. It is expected that the Fund Manager would be able to obtain high yields and better terms than any individual investor would be able to obtain on their own.

CORPORATE GOVERNANCE

The Fund shall have an Investment Committee ("Committee") which shall be primarily responsible for the establishment of investment and risk management policies of the Fund. The Committee will also have oversight over all investment activities of the Fund, consistent with the provisions of the Trust Deed and in accordance with the SEC Rules and Regulations. The Committee will receive and consider periodic reports including compliance and risk reports relating to the Fund's activities.

In addition, the annual reports and accounts of the Fund will be reviewed by the Committee. The audited accounts of the Fund will be published and distributed to all Unitholders annually. INVESTMENT STRATEGY

The Manager's primary goal is to achieve an overall positive total return that is consistent with Unit-Holders' investment goals, objectives and risk profile. Investment decisions will be based on in-depth research analysis, thorough due diligence and continuous assessment of specific investments that offer the best prospects in the short term. The long-term interests of fund investors are central to the way in which the Manager approaches its business and invest for income and growth. The Fund's income strategy seeks to maximize current income while its growth strategy seeks to maximize capital gains. At the core of the investment process and in every investment, decision is the risk management two-step process, which are determining what risks exist in an investment and then handling those risks in a way best suited to the Fund's investment objectives.

RISK FACTORS

The value of an investment generally will fluctuate in response to market conditions, as every type of investment involves an element of risk. A summary of the major risks that can significantly affect the Fund's performance, and should therefore be considered when investing in the Fund, are listed below:

Market/Interest Rate Risk: The value of the Fund's portfolio may be affected by markets risks that are outside its control, including volatility (risk) in interest rates. Interest rate risk is the risk that an unexpected change in interest rate will negatively affect the value of an investment. A fall in interest rates would result in a decline in the market value of the Fund while a rise in interest rates would increase the market value of the Fund.

Credit Risk: Credit risk is the risk that a borrower/issuer of fixed income securities in which the Fund Manager may invest will be unable to make payment or interest as and when due. While the Fund Manager would only invest in investment grade rated securities, there is no guarantee that the ratings of the issuer will remain the same throughout the tenor of the offer

Reinvestment Risk: This is the risk that future money market investments might be at a lower interest rate in comparison to the prevailing rate or that there may be no viable investment opportunity to re-invest in. This is possible in a declining interest rate environment due to the short-term maturity of the investible assets.

FGN Obligations Risk: FGN obligations are subject to low but varying degrees of credit risks and are still subject to interest rate and market risk. While Debt Management Office-issued obligations are backed by the "full faith and credit" of the FGN, securities issued by the

INFORMATION ON NOVA DOLLAR FIXED INCOME FUND

government agencies or government-sponsored entities may not be backed by the full faith and credit of the FGN. If a government-sponsored entity is unable to meet its obligations or its creditworthiness declines, the performance of the Fund that holds securities issued or guaranteed by the entity will be adversely impacted.

Regulatory Risk: The Fund is subject to various forms of regulations. These regulations may have an adverse effect on the Fund. The CBN may from time to time, issue new regulations and guidelines which may have a direct or indirect impact on foreign currency domiciled securities which the Fund will invest in. Regulations issued by the CBN to defend the currency, manage the country's external reserves, inflation or spur economic growth may negatively impact the Fund's performance. Additionally, regulators such as the SEC and The NSE may from time to time, issue circulars that may also impact the Fund's performance.

These regulations may inadvertently, lead to higher cost impact on the Fund. This risk may arise from the possible breach of regulatory guidelines or requirements. There is also the risk that possible amendments to the local and foreign legislation (including tax legislation), may cause additional expenses for the Fund.

Foreign Currency Risk: This is the risk that exchange rates may significantly fluctuate (including changes due to devaluation of Naira being the specified currency for the Fund or the revaluation of an investor's currency) and the risk that authorities with jurisdictions over the investor's currency may impose or modify exchange controls.

Inflation Risk: This is the risk that an increase in price levels will undermine the purchasing power of the Fund's value of investment and returns.

RISK MANAGEMENT STRATEGY

The Fund manager will adopt a robust risk management framework and will ensure that the risk factors mentioned above are monitored on a regular basis in order to minimize their potential effect on the fund's value. The under-listed elements of the Risk Management Framework shall be put in place by the Fund Manager:

- I. The Fund Manager shall from time to time stress test the portfolio using various simulation scenarios to show any potential risk that could impact the Fund. The result of the test shall be reported to the investment committee.
- II. The Fund Manager shall ensure that the Fund's assets are adequately diversified among the approved asset classes. In the case of fixed income instruments, the credit ratings of approved Issuers will also be monitored on an ongoing basis.
